Assignment 1 – HTML, CSS and JavaScript

Introduction

The goal with this assignment is to practice basic HTML, CSS and JavaScript. In order to get a better understanding of HTML and CSS codes, in this assignment we will not be using any tools dedicated to webpage design. We will use simple text editors (i.e. notepad, notepad++, Sublime Text, Visual Studio Code).

Part 1

Below you will see a screenshot of a main page. The goal is to create something similar, with the same positioning of text and image objects using just HTML and CSS. You are not allowed to use any external libraries for this part.

Things to consider:

- This will be a non-functional website. Fill the text with random stuff and use any of the provided images you want. It is also understandable if your page does not exactly look like this, but do your best.
- In all rectangles, the images or video should fill the entire space of the rectangle and not be incorrectly stretched. You are allowed to crop, resize, and change the brightness, contrast and hue of the photos.
- Notice the menus and search bar on the top. Make sure you have them in your page.
- We will check for the styling. It does not have to be exact, but if you are still using "Times New Roman" do not present your work to me or the assistant.

After finishing part 1 and presenting it to the assistant, you can move to part 2.

Part 2

- The orange circle (marked as 1) should be a logo for the page.
- For the top-most news headline (marked as 2) we want to have 3 different pieces of news and have them changed automatically every 5 seconds.
 - "Scrolling animation" is a plus but not a must. You get no extra points or credits by doing the plus part, except that you learn more.
- The box (marked as 3) we want to have different events listed.
- For other news box (marked as 4) we want to have a system at work that when the user hovers the mouse over the text (with white background), the text covers the box and shows more info.
- The video on the bottom left box (marked as 6) should be playable.
- The box on the bottom right (marked as 7) should be covered with any kind of feed e.g., Twitter feed or something similar.
- Any orange color, we want you to replace that with any image that we provided to you. The total size of the website including all images and video is not allowed to be larger than 5 MB.
